

Cambodia Sustainable Landscape and Ecotourism Project

2019 - 2026

World Bank

Cambodia

NATURE BASED SOLUTIONS

forests, watershed management, sustainable management, indirect non-structural measures

The Project Development Objective is to improve protected areas management, and to promote ecotourism

opportunities and non-timber forest product value chains in the Cardamom Mountains-Tonle Sap landscape. The project aims to sustain and increase forest cover which will reduce soil erosion, maintain or improve water quality for downstream users, provide protection to farms and villages located in floodprone areas, reduce GHG emissions, and protect critical natural habitats.
