

Cameroon: Inclusive and Resilient Cities Development Project

2017 - PRESENT

World Bank
Cameroon

NATURE BASED SOLUTIONS

urban green spaces

The objective of the Inclusive and Resilient Cities Development Project for Cameroon is to improve urban management and access to infrastructure in selected urban areas, particularly for poor neighborhoods, and increase resilience to natural hazards and other eligible crises. There are four components to the project, the first component being strengthening capacity for inclusive and resilient urban management. The second component is the improving connectivity and living environment in beneficiary cities. This component will finance a range of investments to improve connectivity and integration of poor neighborhoods within the beneficiary cities, access to infrastructure and basic services in targeted neighborhoods, and the broader living environment of beneficiary cities. The third component is the Contingent Emergency Response (CER). Finally, the fourth component is the project management, coordination, monitoring and evaluation. This project will implement NBS interventions to upgrade urban neighborhoods.
