

Capturing Coral Reef and Related Ecosystem Services (CCRES)

2014 - 2019

World Bank

Philippines

NATURE BASED SOLUTIONS

mangroves, seagrass, coral reefs

The Project Development Objective is to design and support the uptake of innovative models for valuing mangrove, seagrass and coralreef ecosystem services with the potential to enhance the sustainability of marine-based enterprise and marine spatial planning in select coastal communities in Indonesia and the Philippines. The project developed a myriad of tools to help capture the benefits of mangroves, seagrass, and coral reefs , and ensured these would be adopted broadly through workshops and dissemination.
