

Cap Haitien Urban Development Project

2020 - 2027

World Bank

Haiti

NATURE BASED SOLUTIONS

urban green spaces, grassland and other vegetation

The development objective of Cap-Haitien Urban Development Project for Haiti is to improve selected urban infrastructure and public spaces to support a more livable and resilient Cap-Haitien city-region. This project has four components. 1) The first component, Urban Infrastructure Investment, aims to support the government of Haiti (GoH) to carry out large urban infrastructure investments; and neighborhood upgrading investments, including the preparation of required feasibility studies, environmental and social studies, detailed designs, construction works and construction supervision. 2) The second component, Capacity Building, aims to support the GoH to carry out infrastructure planning, technical studies and activities under Component 1 by strengthening its capacity and the capacity of the Municipality to maintain urban infrastructure investments. 3) The third component, Contingent Emergency Response, aims to finance provision of support upon occurrence of an eligible emergency. 4) The fourth component, Project Management and Implementation Support, aims to finance costs related to Project management and implementation as needed by the project implementation unit. All public spaces supported by the project will incorporate greening features to increase vegetation cover and increase soil permeability.
