

Green Agricultural and Rural Revitalization Program for Results (Hubei and Hunan)

2023 - 2029

World Bank

China

NATURE BASED SOLUTIONS

ponds, lakes, small water bodies, inland wetlands

The development objective of the Green Agricultural and Rural Revitalization Program (RRP) for Results (Hubei and Hunan) for China is to enhance adoption of environmentally sustainable agricultural and rural infrastructure development practices in selected areas of Hubei and Hunan. The four result areas (RAs) are chosen to address the main challenges facing agriculture and rural infrastructure development under the RRP: (a) filling the remaining gaps in institutional capacity for governance (RA1), (b) reducing agricultural greenhouse gas (GHG) emissions and nonpoint source (NPS) pollution (RA2), (c) reducing wastewater and solid waste pollution (RA3), and (d) restoring degraded natural capital - especially land and water (RA4). The project will promote the use of NBS to reduce pollution, including constructing retention ponds and wetlands to filter pollutants.
