

Integrated Landscape Management in Dominican Republic Watersheds Project

2022 - 2027

World Bank

Dominican Republic

NATURE BASED SOLUTIONS

forests, rivers & floodplains, coastal wetlands (excluding mangroves), sustainable management

The objective of the project is to strengthen integrated landscape management in targeted watersheds in the Dominican Republic. The project will incentivize farmers to adopt agroforestry systems; restore and protect riverbanks, wetlands, and riparian forests; restore degraded and fragmented forest ecosystems; and diversify environmentally sustainable livelihoods.
